Dear Hiring Manager,

I am a Backend Developer specializing in .NET, system integrations, and API development, with several years of experience building and maintaining production systems for ERP, financial, and business process automation environments.

I am currently available for B2B/contract work and actively planning to relocate to Copenhagen in case of a successful collaboration. I am open to remote work initially, as well as hybrid or on-site arrangements after relocation.

I have strong hands-on experience with ASP.NET Core, C#, SQL databases, Windows services, and containerized deployments, and I enjoy working on complex integration challenges where reliability, performance, and clean architecture are critical.

Kind regards,

Dominik Karczewski
